

S. S Jain Subodh P.G. (Autonomous) College SUBJECT - .NET Technology TITLE - ASP.NET

Introduction

to ASP.NET

Introduction to ASP.NET

- ASP.NET is part of the Microsoft .NET framework
- ASP.NET is an effective and flexible technology for creating interactive and dynamic web pages.
- It is a convergence of two major Microsoft technologies:
 - Active Server Pages (ASP)
 - Active Server Pages is Microsoft's server side scripting technology for building dynamic web pages.
 - .NET Framework
 - The .NET Framework is a suite of technologies designed by Microsoft where program development takes place.

Introduction to ASP.NET

- It is built on .NET Common Language Runtime
- ASP.NET :
 - Provides better user authentication
 - Has better language support.
 - Has a large set of new controls (web controls)
 - Uses compiled code, which increases the performance of the applications
- It is programmable using any of the .NET languages (VB.NET, C#, VJ# etc).
- The ASP.NET pages are saved with the **.aspx** extension.

Working of an ASP.NET Application

- To execute an ASP.NET file, the following steps are followed:
- A web browser sends a request for an ASP.NET file to the web server by using a URL.
- 2. The web server receives the request and retrieves the appropriate ASP.NET file from the disk or memory.
- 3. The web server forwards the file to the ASP.NET script engine for processing.

Working of an ASP.NET Application

- 4. The ASP.NET script engine reads the file from top to bottom and executes it.
- 5. The processed ASP.NET file is generated as an HTML document and the ASP.NET script engine sends the HTML page to the Web server.
- The Web server then sends the HTML code to the client which interprets the output and displays it.

Advantages of ASP.NET

- Easy Programming Model
- Flexible Language Options
- Compiled Execution
- Rich Output Caching
- Web-Farm Session State
- Enhanced Reliability
- Master Pages
- Themes
- Improved Security
- Web Services
- Improved Performance and Scalability

Ready

Creating a New Web Application

- To start a new Web Application in VS 2008, Click the Create Web Site button on the Start page or Select File > New > Web Site
- The New Web Site allows you to choose:
 - Templates
 - Language for creating an application
 - Location where the application will be created

| ew Web Site | | ? |
|----------------------------|--|--------|
| Templates: | | |
| Visual Studi | o installed templates | |
| ASP.NET We Site | ASP.NET Web Personal Web Empty Web ASP.NET Service Site Starter Kit Site Crystal Re | |
| My Templa | es | |
| Search Online Templates | | |
| A blank ASP.NE | r Web site | |
| ocation: | File System | Browse |
| anguage: | Visual C# | |
| | | OK |

Creating a New Application (Continued)

- After you create a new Web Application, Default.aspx page is added to this Website. To Rename this page, Select the page from the Website node in the Solution Explorer > Right Click > Rename
 - Files can be added to the Project, using Solution Explorer:
 - Right click on the project node, in the Solution Explorer, and select the option Add New Item.
 - The Add New Item window will popup.
 - Select the type of file (item) to be added and click on Add.

Solution Explorer

- Presents a *tree view structure* of files present in the project.
 - By default a New Website will contain:
 - An App_Data folder
 - A Default.aspx page (including Default.aspx.cs)

To view Solution Explorer:

Select View > Solution Explorer

OR

Press buttons Ctrl+W,S

Solution Explorer (Continued)

The Toolbar at the top of Solution Explorer enables various tasks.

Toolbox

- To add controls in the Design Window use Toolbox.
- There are various *tool tabs* available in the Toolbox.
 - The controls in the IDE are presented in a hierarchical manner (e.g., Standard Tab, Data Tab, Validation, Navigation, WebParts etc.).
 - Depending on the type of project (application) the toolbox tabs will vary.
- To view the tool box:
 - Select menu View > Toolbox

OR

- Press buttons Ctrl+Alt+X or Ctrl+W, X
- You can also view the controls as icons by rightclicking on the toolbox you want to change and deselecting the List View.

| 🗄 Standard | |
|---------------------|--|
| 🗉 Data | |

| 🗄 Login | |
| 🗄 WebParts | |
| 🗄 HTML | |
| 🗄 Crystal Reports | |
| 🖃 General | |

an item onto this text to add it to the toolbox.

Properties Window

- To view or change the properties and events of a selected control during design use the Properties Window
- To configure a control:
 - Click once to select it
 - Press F4 or Select menu View > Properties window
 - Modify the appropriate properties in the window
- There are various options provided for viewing / the properties of the selected control, such as:
 - Categorized view
 - Alphabetical view
 - Properties view (default)
 - Events View
 - Property pages

| | Properties | 4 X |
|----------|-------------------|----------------------|
| | Button1 System.We | b UI.WebControls.B 👻 |
| \sim i | Bi 🕢 🖉 | |

| | (| |

Adding an Event

- Events can be added to the code in one of three ways:
 - 1. Double clicking a control in design view
 - 2. Typing the code manually
 - 3. Selecting the Events Icon and double clicking the required event from the Properties Window

| Solution Explorer - C:\TestWebApplication\ | ↓ ₽ × |
|--|--------------|
| | |
| | |
| Properties | → ╄ × |
| Button1 System Web.UI.WebControls.Button | 7 |
| | |
| | - 1 (|
| | * |
| | |
| Disessed | |
| Disposed | |
| Inic | |
| DreDender | |
| Helead | |
| | |
| | |
| Click | |

Project Settings

- Project Settings can be adjusted using various options in the Project Properties menu or by using the Solution Explorer window.
 - These settings change based on the type of application developed.
- Setting Startup Page:
 - *Right Click on the form* you want set as the startup page in the *Solution Explorer*.
 - Select option Set As Start Page.
- Startup Project (In case of multiple projects):
 - *Right Click on Project* to set as startup project in the *Solution Explorer*.
 - Select Option Set As StartUp Project.
